

ORDERING TRIANGLES

In the attached sheet you will find the eight different triangles that are possible to be constructed with the geoplane 3x3. In order to measure the area of each triangle, we will take the following triangle as area unit, that will be, therefore, our unit triangle:

- ✎✎ Which is the measurement of the area of each of the other triangles?; that is to say, how many unit triangles are included?
- ✎✎ Order them all from the least to the greatest area.

YOU WILL NEED:

The worksheet with the triangles, pencil and a blank sheet.
